

Git Commit should look like:

<Type>: <Message> <Meta>

### ## Type

1. feat - Adding new features
2. fix - Fix bugs
3. style - Changes that do not affect the meaning of the code  
(white-space, formatting, missing semi-colons, etc)
4. refactor - A code change that neither fixes a bug nor adds a feature
5. docs - Documentation only changes
6. test - Adding missing tests

### ## Message

Subject line should contains succinct description of the change.

- use imperative, present tense: “change” not “changed” nor “changes”
- don't capitalize first letter
- no dot (.) at the end
- No complex sentence, separate into two or more commits

### ## Meta

Uses hashtag(#) to tag the issue related to the commit.

- Each commit should tag one issue.
- No multiple issue tag on one commit, should separate into multiple commits
- If the commit doesn't have related issue, create one for it.

Example:

1. Add a new feature

`git commit -m “feat: add mail services #233”`

2. Fix bugs

`git commit -m “fix: handle scan package as brand owner #234”`
