

<b>Unit of Study</b>	COMP5703
<b>Group name</b>	CP28/1
<b>Project Name</b>	An Online Web-Streaming Service for Bitcoin-Exchanges
<b>Project start date</b>	Starting from 07/03/2018
<b>Project point person</b>	Martin Brian McGrane

<b>Quick description</b>	We will retrieve, store, and visualize data from various cryptocurrency exchanges for customers and also employ data modelling techniques to find suitable data-structures to represent order books of exchanges, will store them in a relational database, and visualize them via a web-interface using Materailize.js and NodeJs.

<b>Project Status Report</b>	#03	Day of the week, 20/03/2018
------------------------------	-----	-----------------------------

<b>Status item</b>	<b>Status up to last week</b>	<b>Planned for this week</b>
<b>Major deliverables</b>	The first thing I have done this week was getting familiar with how to use git tools named bitbucket and gitkraken. The second thing was thinking about our website layout.	Next week, I need to meet my group members twice. Then we need to discuss the main purpose of our capstone project and figure out some creative ideas on this project.
<b>Planned delivery date</b>	20/03/2018	27/03/2018
<b>Major issues</b>		Quickly understand the principle of block chain and how to trade within bit coins.
<b>Major risks</b>	None	Unknown
<b>External dependencies</b>	Google search tools and Team members	Google search tools and bitcoin exchange websites
<b>Estimated effort (h)</b>	18 hours	20 hours
<b>Recorded effort (h)</b>	20 hours	20 hours
<b>Status (RYG)</b>	Green	Yellow
